Faucet Installation Procedures

IMPORTANT!

Prior to installation, make sure the tab of the #28 Hose Protector is fully inserted into the faucet body. This tab needs to clear the metal base rim to allow room for the hose to glide in and out.

step ①

step ②

step ③

Connect spray hose to quick-connection hose until you hear "click".

The tip of the quick connection should spring back to original position. Test by pulling both ends to make sure they do not separate.

step ④

Install the weight (part #22) just above the lowest point of the hose (part #4) on the side that connects to the spray head. Tighten screws on the weight with a Phillips screwdriver.

step ⑤

step ⑥

IMPORTANT!

Run water out of Hot and Cold angle valves to flush debris **BEFORE** connecting the water supply lines.

Place a bucket under the valve. When valve is turned on water will shoot up. Cup over the valve opening so water will fall into the bucket.

Connect Hot & Cold water lines to angle valves. Tighten securely, but do not overtighten.

step ⑦

IMPORTANT!

Remove the spray head and perform a final flush to cartridge, faucet body and hose.

step ⑧

step ⑨
